

What is claimed is:

1. A compound sound generator for an information equipment comprising:

a case of the equipment;

5 a frame set in the case;

a speaker and receiver provided in the frame, the speaker having a first diaphragm and the receiver having a second diaphragm;

10 a first back chamber behind the first diaphragm of the speaker and a second back chamber behind the second diaphragm of the receiver; and

a baffle formed on a part of the frame for dividing the case so as to separate the first and second back chambers from each other.

15 2. The compound sound generator according to claim 1 wherein one of the first and second back chambers of the speaker and the receiver is opened to the outside of the case, the other chamber is opened to the inside of the case.

20 3. The compound sound generator according to claim 2 wherein the first back chamber of the speaker is opened to the outside of the case.

25 4. The compound sound generator according to claim 3 wherein the second back chamber of the receiver is opened to the outside of the case at a same surface as a surface where a sound discharge opening of the speaker is formed.

5. The compound sound generator according to claim 3 wherein the first back chamber of the receiver is opened to the outside of the case at a surface different from a surface

where a sound discharge opening of the speaker is formed.
